Class assignment:

Using the MPG dataset, which is available with the ggplot2 library, produce a document that includes the following elements: headers, text, tables, and plots.

Tables should include a comparison of city and highway mileage by the class of car and the best three car models for city and highway mileage for all the years in which data is available.

Plot the data displaying as much of the data as you can. Put continuous variables on the axes and include a locally smoothed regression line to show the relationship with mileage. Also make a box plot comparing city and highway MPG by class of car.

Tables

- Improve the code by using an *apply* functional

Table 1: Mean City and Highway MPG by Car Class

Class	City	Highway
2seater	15.4	24.8
compact	20.13	28.3
midsize	18.76	27.29
minivan	15.82	22.36
pickup	13	16.88
subcompact	20.37	28.14
suv	13.5	18.13

Tables

- Improve the code by using an *aggregate* functional

Tables

- Improve the code by using *dyplr*
- The next table is a bit tricky.
